

Pairing Process:

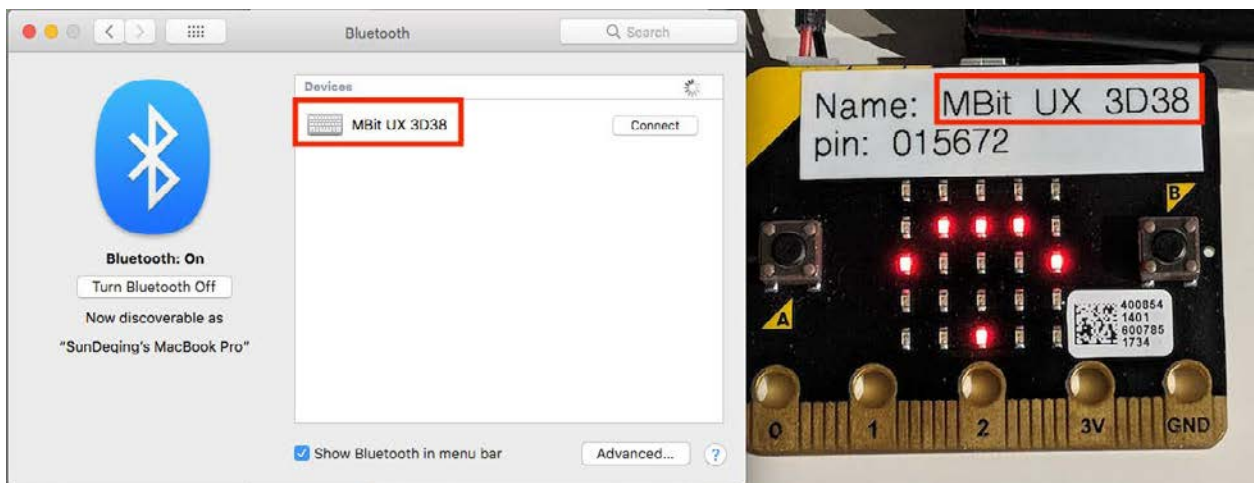

1. Plug in battery pack, hold A & B button until you see screen turns black and show welcome message "UX WEEK" again. Then release the 2 buttons.
This will erase all existing pairing information on MicroBit.

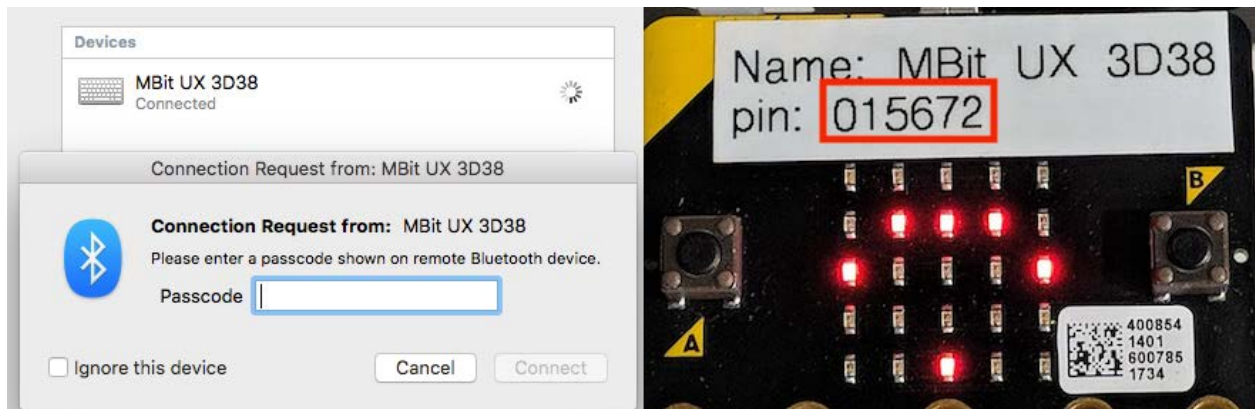

2. Click Bluetooth icon on top right corner of your Mac's desktop. Click "Open Bluetooth Preferences"

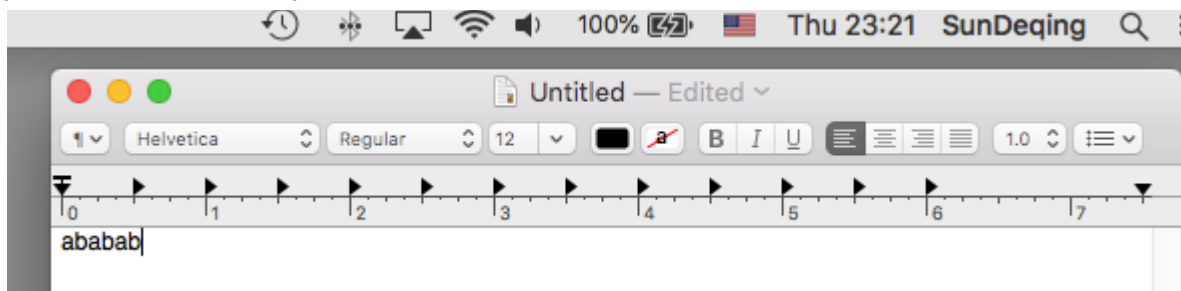

3. In Bluetooth Preferences, look for a device with has exactly same name to the name on your board.

- Click “Connect” button to connect to that device, when you are asked for passcode, enter the passcode on your board

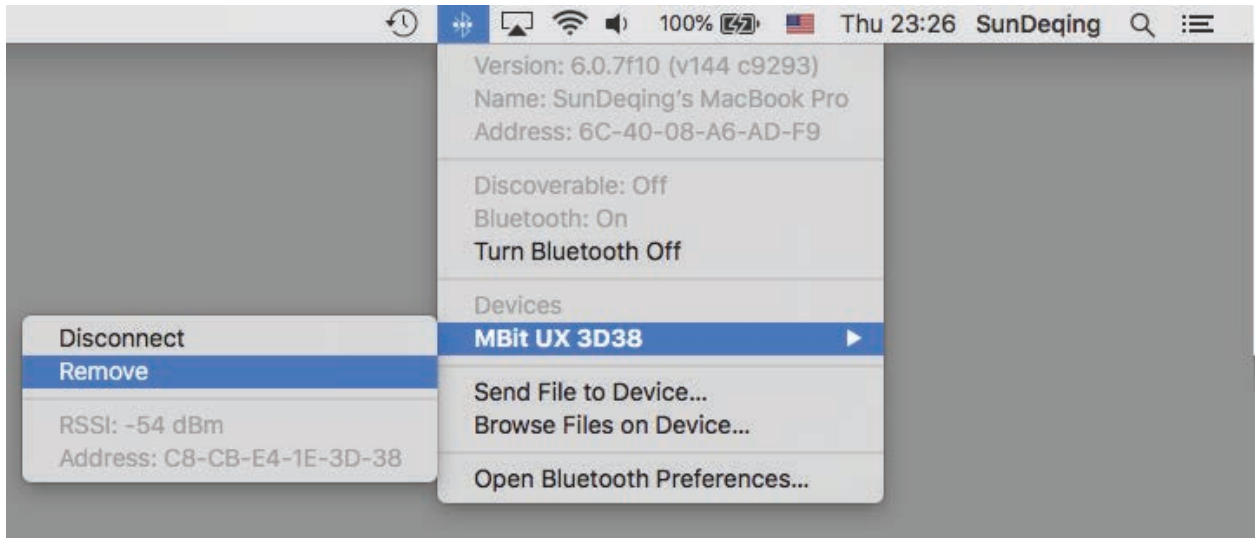

- In any text editor, try to press buttons on MicroBit to type. If you see typed characters, you paired successfully.

Unpairing Process:

1. Hold “Alt option” key on keyboard and click bluetooth icon.
Find your paired device and remove it.

2. Now your Mac has cleared pairing information. You are ready to connect MicroBit to another device.
