

Pairing Process:

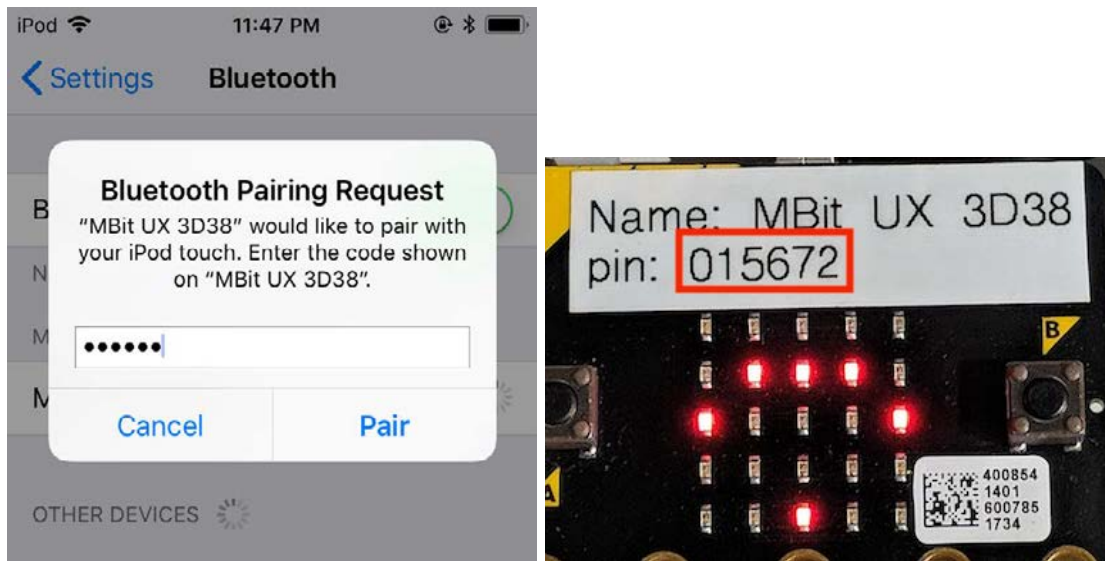

1. Plug in battery pack, hold A & B button until you see screen turns black and show welcome message "UX WEEK" again. Then release the 2 buttons.
This will erase all existing pairing information on MicroBit.

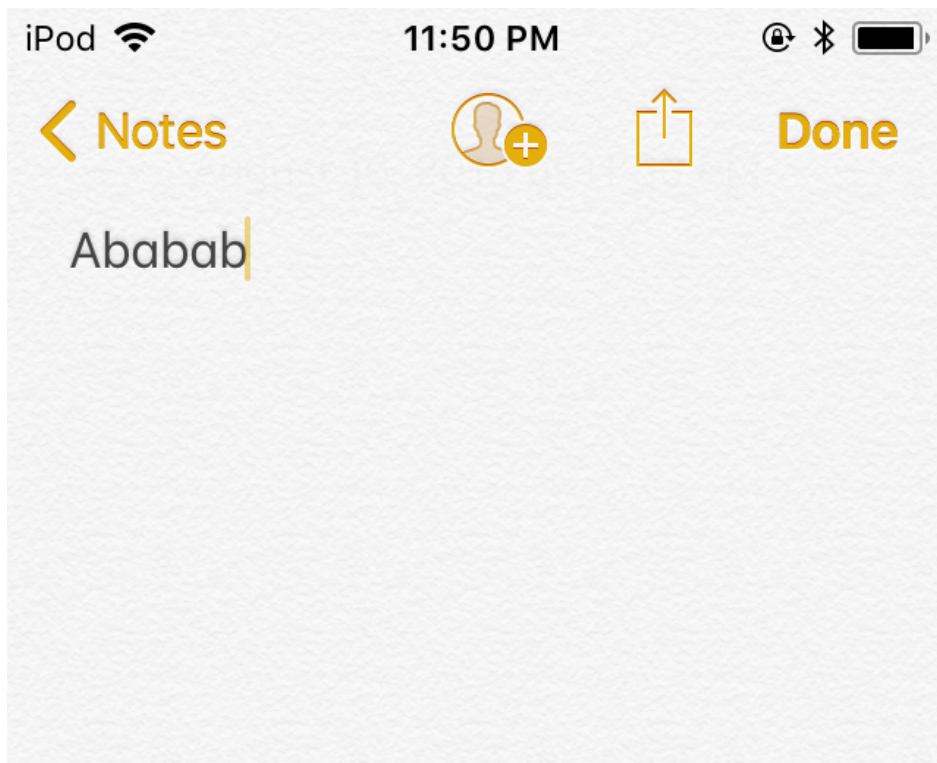

2. Goto Settings->Bluetooth, look for a device with has exactly same name to the name on your board.

3. Click that device to connect, when you are asked for passcode, enter the passcode on your board.

4. In any text editor, try to press buttons on MicroBit to type. If you see typed characters, you paired successfully.

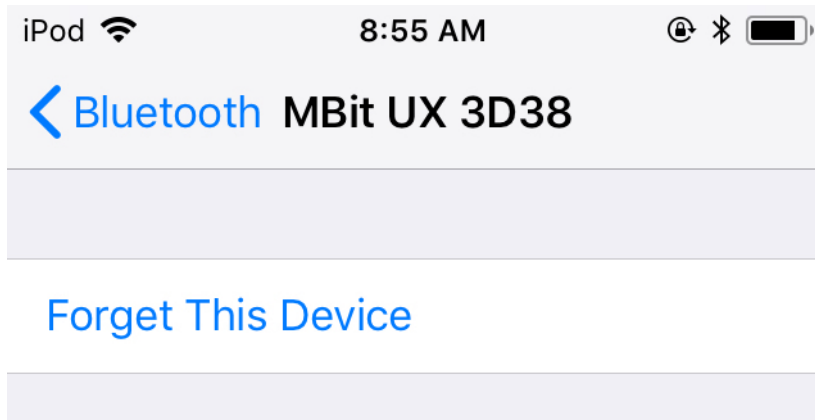

Unpairing Process:

1. Click info icon near Microbit entry.

2. Click "Forget This Device"

3. Now your iOS device has cleared pairing information. You are ready to connect MicroBit to another device.
