

Pairing Process:

1. Plug in battery pack, hold A & B button until you see screen turns black and show welcome message "UX WEEK" again. Then release the 2 buttons.
This will erase all existing pairing information on MicroBit.

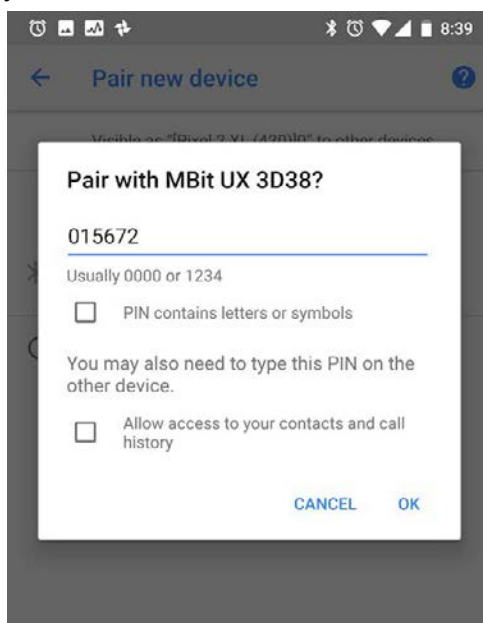

2. Go to "Settings"->"Connected Devices", Click "Pair new device". The location may be different on your device.

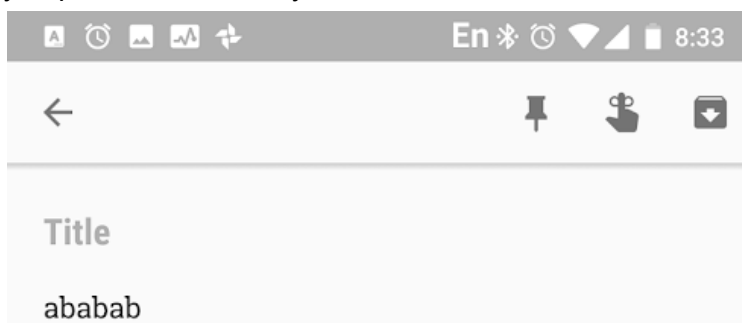

3. In Available devices, look for a device with has exactly same name to the name on your board.

4. Click to connect to that device, when you are asked for passcode, enter the passcode on your board

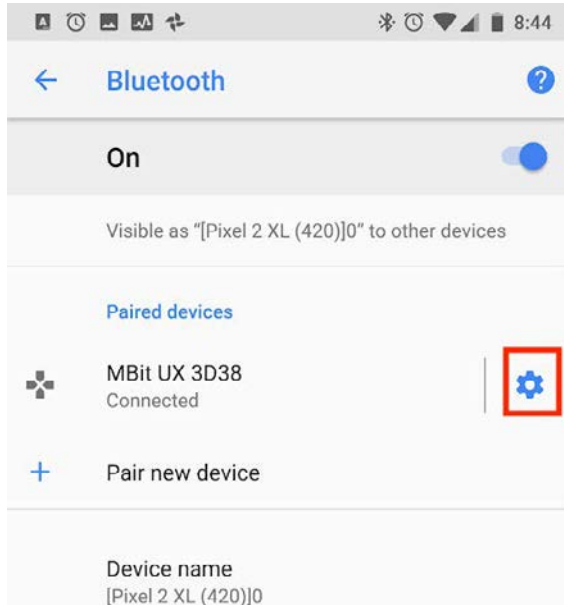

5. In any text editor, try to press buttons on MicroBit to type. If you see typed characters, you paired successfully.

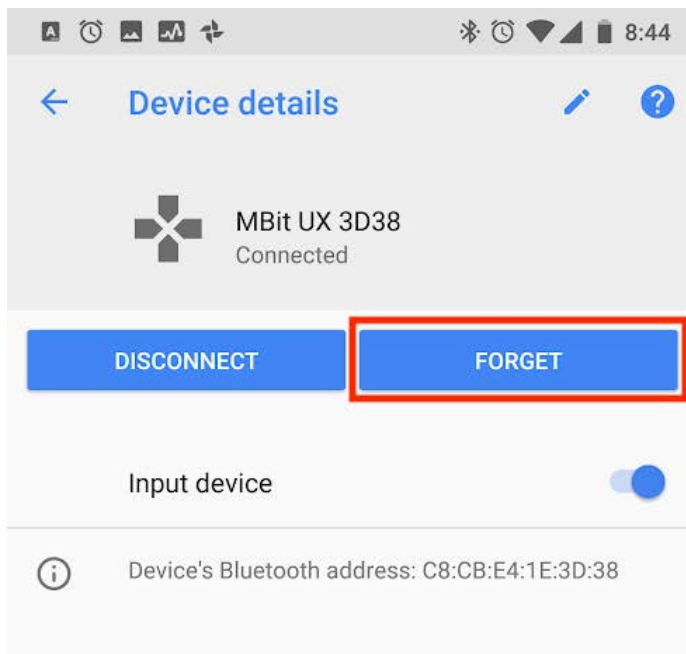

Unpairing Process:

1. Click gear icon near Microbit entry.

2. Click "Forget"

3. Now your Android has cleared pairing information. You are ready to connect MicroBit to another device.
